THE PERFECT LOW FLOW, LOW SPEED, SLOTTED SPRAY BALL

- Slow Constant Rotation - Improved Cleaning Action
- No Ball Bearings - Lower Maintenance, Longer Life
- Low Flow - Reduced Water, Chemical & Effluent Costs
- High Efficiency Fan Jets - Reduced Cleaning Time
- FDA and ATEX - Regulatory Compliant

VERSATILE & UNIQUE
The Breconcherry Turbo SSB 75 takes the popular slotted spray ball format into its next evolutionary phase by removing the ball bearings and slowing the rotation speed down. A unique pressure regulation system in the drive chamber helps to keep the rotation speed consistent under differing pressure. The unit functions with a hydraulic and PTFE bearing system giving the unit an increased lifetime, reducing wear and potentially prohibiting any contamination issues associated with bearing degradation.

APPLICATIONS
Ideally suited to low flow, variable pressure applications where a slow constant rotation speed is required to give longer chemical dwell times for improved cleaning efficiency. The tried and tested design makes the units truly versatile across any industry sector. The units are suitable for cleaning small/medium size vessels and manufacturing equipment. Compact in design, effective in performance, they meet all the essential FDA requirements of hygiene and purity. This makes them highly suitable for the pharmaceutical, and biotech industries as well as food, beverage and other hygiene conscious industries.

OPERATION
Wash fluid is directed through the slots on the rotating ball, producing independent strong fan jets giving total coverage. Each fan jet targets a specific area of the vessel.
MAINTENANCE & INSPECTION
The low wear design requires minimal maintenance. No Spare parts are required. Technical assistance can be obtained through the global Breconcherry distributor network. As with all mechanical devices, it is recommended that the unit be regularly inspected for correct operation.

MINIMUM MANHOLE/FLANGE SIZE
The minimum manhole/flange opening size required for unit insertion is 50mm.

TECHNICAL DATA
Materials of Construction: Stainless Steel 316L, PTFE, C-PTFE,
Max. Operating temperature: 95° Centigrade
Max. Ambient Temperature: 140° Centigrade
Standard Connections: 3/4” BSP/NPT Female
Nozzles Characteristics: 360° Spray Pattern
Other materials and connections are available. Please contact us for a quotation.

Flow Rate Versus Pressure

Cleaning / Wetting Radius

GENERAL ARRANGEMENT DRAWING

For optimal efficiency use a pre-filter or strainer to prevent particulate clogging.
