GEA Tuchenhagen VARIPURE® Static Cleaners

for tank and vessel cleaning

engineering for a better world  GEA Mechanical Equipment
GEA Tuchenhagen offers a comprehensive product range for almost all cleaning tasks. All VARIPURE cleaner are to the latest state-of-the-art designed and manufactured. The devices meet your high hygiene claims considered by the geometrical shape and the best surface texture. These parameters prove best meet the requirements to use our cleaners in the brewing and beverage industries, in the cosmetic and pharmaceutical, chemical, paint and coatings as well as in the biotechnology industry.

**Application**
For low pressure internal cleaning of Vessels, Tanks, Containers of all kinds, Machines

**Method of Operation**
Cleaning is achieved by intensive wetting and rinsing of the tank wall. By dosing appropriate detergents, the cleaning effect can be enhanced and the cleaning times reduced.

Two operating modes are possible:
- continuous spraying for media which can easily be washed off
- pulse-pause operation for media which require a reaction time. Pulse-pause operation reduces the quantity of CIP medium.

The spray balls with slip-on connection give a small annular gap between the spray ball sleeve and insertion pipe outer diameter allowing this area to be cleaned during operation.

**Design**
Fixed by:
- slip-on connections secured with clip
- threaded sleeve

**Material**
1.4404/316L (standard), 1.4435/316L, Alloy 59/2.4605

**Dimensions of pipes**
Type 05, DN 10 — Type 1, DN 25 — Type 2, DN 50
VARIPURE Static Cleaners - Spray Balls

* Dimensions for spray balls type 05 with thread made of 1.4404; D=28, H=25

Conversion formula for other flow rates: \( Q_2 = Q_1 \times \sqrt{\frac{p_2}{p_1}} \) [m³/h]

Recommended operating pressure 1.0 to 1.5 bar, for agitator tanks 1.8 up to max. 2.5 bar
VARIPURE Static Cleaners - Spray Balls

**Cleaning Lances** for low pressure internal cleaning of tanks

**Features**
- Simple operation for effective and reliable cleaning
- Customised adaptation to all cleaning requirements
- Self cleaning of the cleaning lance segment projecting into the tank, including tank connection

**Application**
For low pressure internal cleaning of Vessels, Tanks, Containers of all kinds, Machines

**Insertion lengths**
Insertion lengths available in steps of 100 mm
- Type 05 from 100 to 400 mm
- Type 1 from 100 to 800 mm
- Type 2 from 100 to 1,000 mm

**Material**
Stainless steel 316L (1.4404)

**Standard connections**
- A without tank connection (weld-in type)
- VARIVENT® groove flange
- A VARIVENT® cover 50/40 for Type 0.5 and 1
- A Liner/groove nut acc. to DIN 11851
- C Clamp connection DN 50 for Type 1 and 2
- D Welded end
- D VARIVENT® groove flange
- D Male part acc. to DIN 11851

---

Spray patterns and spray balls

Spray pattern A for vertical tanks with tank internals
Spray pattern B for vertical tanks with sockets open at the top
Spray pattern G for vertical tanks
Spray pattern LA for vertical tanks
Spray pattern L for horizontal tanks
Spray pattern LA for horizontal tanks

VARIPURE Static Cleaners - Spray Balls
VARIPURE In-Line Sprayer IS 25 is fitted with a spray head that is extended into the tank or pipe for cleaning. Decisive advantage: After the cleaning operation, the spray head is retracted to its resting place and is flush with the tank/pipe wall; the spray head no longer projects into the product chamber. The In-Line Sprayer helps you significantly reducing cleaning costs as it dispenses with the need to accumulate cleaning solution in agitator tanks or to flood the pipes.

Characteristics of the VARIPURE In-Line Sprayer

1. Electrical components in the control module are fully splash-water protected (up to IP67).
2. Sturdy and reversible actuator – spring-to-close/air-to-open or vice versa. Air backup of the spring is possible.
3. ECOVENT® actuator
4. The open lantern separates the actuator from the product section of the valve. It permits the visual inspection of the spindle seal.
5. The machine rolled valve spindle finish provides for excellent wiping action as it passes through the seal, ensuring long life of the stem seal.
6. Housing with one or two sockets.
7. The metallic stop of the valve disk provides a defined deformation of the seal, ensuring long seal life.
8. Seat ring and guide for the spray head.
9. Retractable spray head
10. Easy to fit and remove due to the hinged clamp.
Pipe and tank connections

Housing connection IS-T for welding into the tank shell

VARINLINE® housing connection from DN 80 up to DN 150, 4" OD and 6" IPS

Advantages

- As the spray head does not project into the product chamber it cannot constitute a source of contamination during production
- Gap-free seal
- Especially suitable for installation in pipes, tank shells and VARIVENT® In-Line housing

Housing connection IS raw for welding into pipes from DN 200 up to DN 400

Housing connection T 50/40 for welding into tank bottoms or tank shells

Proximity switch holder with two proximity switches

Control and feedback systems

The valves can be equipped with the well-established GEA Tuchenhagen control and feedback systems.

T.VIS® control system

**Technical characteristics**

- Operationally safe and reliable
- Spring-actuated closing and pneumatic opening
- Vacuum resistant up to 0.1 bar abs.
- Feedback via control module
- Feedback via mounting for proximity switches
- ATEX zone 0G/20D possible
- Product contacted seals (FDA)
  - EPDM
  - FKM
  - FFKM (resistant to solvents)
- Cleaning temperature max. 98 °C
- Can be steamed for 30 min. at 140 °C
- Material 1.4435/316L
- Material certificates for product contacted parts according to EN10204-2.2 and EN10204-3.1
- Product contacted surfaces Ra ≤ 0.8 μm
- Pipe connection dimensions according to
  - DIN 29x1.5 mm
  - ISO 33,7x2.0 mm
GEA Group is a global mechanical engineering company with multi-billion euro sales and operations in more than 50 countries. Founded in 1881 the company is one of the largest providers of innovative equipment and process technology. GEA Group is listed in the STOXX Europe 600 Index.
